USL FINANCIALS, INC.

USL Financials is available in the cloud utilizing the Microsoft Azure cloud-based platform. Microsoft Azure is a cloud computing service created by Microsoft for building, testing, deploying, and managing applications and services through Microsoft-managed data centers.

This solution features our full-range accounting suite on the cost-saving, trusted Microsoft cloud-based service, taking your security and productivity to the next level. Migrate your in-house infrastructure to a secure, reliable, cost effective, and scalable system without compromising the speed and performance you have come to expect with world-class applications. Enjoy the full user interface, local printing and scanning capabilities you rely on with your local applications now in the cloud. Easy, secure access to your accounting data from anywhere is available on your Windows and Mac devices.

The USL Financials cloud offering on Microsoft Azure uses the same version of USL Financials that is available on other platforms. The move to Azure is a "lift and shift" migration utilizing the Azure Infrastructure as a Service (IaaS) model. The solution typically consists of two virtual Windows Servers on Azure:

- ✓ Windows Server Remote Desktop Service Host includes remote connections for the users. USL Financials and Office 365 are installed on this server.
- ✓ Windows Server with SQL Server (Standard or Enterprise) for all databases.

Local machine connectivity to Azure uses the secure and encrypted Microsoft Remote Desktop Connection application that is available for:

- ✓ PCs
- ✓ Macs

The cloud offering shifts your hardware from on premises to the cloud with local printing and scanning. In addition, data security and automatic backups are provided by Microsoft. You gain the reliability and up-time benefits of Microsoft Azure.

Your direct subscriptions with Microsoft include a 99.99 percent service-level agreement (SLA) assurance of uptime for the virtual servers.

USL Financials can provide consulting services to assist in the migration process and the setup of best practices for Azure.
